

The **VLDI** HQ

**Hybrid Design
High Quality Digital A.V. Interconnect
Halogen Free
Genuine Van den Hul product from The Netherlands**

Introduction

The cable in this package is built according to the specification for the High-Definition Multimedia Interface (HDMI®). HDMI is able to transfer high quality uncompressed multi-channel audio data and all consumer electronics' video formats between DVD players, television sets, video displays, projectors and other compatible electronic equipment. The same interface also carries status and control information in both directions.

HDMI brings advantages to the customer. Instead of connecting equipment with many different connectors and cables, HDMI replaces the maze of cabling with easy to use connectors and cables. These cables transfer uncompressed digital audio and video data in superior quality. The all-digital rendering of video and audio skips the quality losses which are involved with the digital-to-analog and analog-to-digital conversions mostly associated with analog interfaces. Because of the interface's built-in content protection, the major motion picture producers are able to distribute high definition digital content towards the customer's hometheatres and domestic settings. HDMI supports intelligent communication between devices, which enables new functionality and a grow path towards a fully integrated home communication and entertainment system.

High performance cables: what really matters.

We, at van den Hul, strongly believe in high performance for a modest and reasonable price. The VDH HDMI HQ is an improved version of our already very good regular VDH HDMI cable, built for those situations where the highest resolution and quality are desired (it supports full spec. 1080P). The materials in this HDMI HQ cable are halogen free, applied around a further optimised Hybrid cable architecture and an improved metal connector for maximum shielding and durability. So, the high performance secret lays in the combination of materials, has just as much to do with experience, knowledge, listening, judging, visual content, a well balanced production environment and, just as important, motivated, enthusiastic and knowledgeable people in our factories and design department. Basically, most of the ingredients that really make a difference in producing great cables are not in this box. You will, however, create awareness about these goodies when listening and watching audio visuals powered by our very high standard in cable technology. We wish you a lot of pleasure with this new HDMI High Quality digital interface!
