

THIS PRODUCT PASSED

The V **VDH** FLAT 180

SELL/PURCHASE ONLY WITH VDH SEALS INTACT

**Metal Design Digital A.v. Interconnect
Halogen Free**

**HDMI 1.4 Fast Speed compatible up to 10 meter length
Genuine Van den Hul product from The Netherlands**

Introduction

The cable in this package is built according to the specification for the High-Definition Multimedia Interface (HDMI). HDMI is able to transfer high quality uncompressed multi-channel audio data and all consumer electronics' video formats between DVD players, television sets, video displays, projectors and other compatible electronic equipment. The same interface also carries status and control information in both directions.

HDMI brings advantages to the customer. Instead of connecting equipment with many different connectors and cables, HDMI replaces the maze of cabling with easy to use connectors and cables. These cables transfer uncompressed digital audio and video data in superior quality. The all-digital rendering of video and audio skips the quality losses which are involved with the digital-to-analog and analog-to-digital conversions mostly associated with analog interfaces. The 180 degree swivel connector, in combination with the flat cable-design allows easier installation as well as closer to the wall location of equipment without the risk of overstretching and/or breaking the cable.

HDMI supports intelligent communication between devices, which enables new functionality and a growth path towards a fully integrated home communication and entertainment system. This cable is fully HDMI 1.4 **Fast Speed compatible**, including Deep Color and xvYCC as well as Lip Sync and HD lossless audio formats like Dolby TrueHD and DTS-HD Master Audio™ up to 10 m. length minimum.

It can deliver 1080i in lengths up to 15 meter.

High performance cables: what really matters.

We, at van den Hul, are not interested in producing the next very expensive cable. We strongly believe in high performance for a modest and reasonable price. High performance and a long term stability of mechanical and electrical properties do not necessarily relate to sky high prices. The materials in this van den Hul cable are halogen free and applied around optimised cable architectures. So, the high performance secret lays in the combination of materials, comparable with the Haute Cuisine. Although we use the best materials available, building high quality cables has just as much to do with experience, knowledge, listening, judging, visual content, a well balanced production environment and, most important, motivated, enthusiastic and knowledgeable people in our factories and design department. Basically, most of the ingredients that really make a difference in producing great cables are not in this box. You will, however, create awareness about these goodies when listening and watching audio visuals powered by our high standard cable technology. We wish you a lot of pleasure with this new digital interface!

A.J. van den Hul - The Netherlands
